

COVID 19

Temperature Screening Program

Protocall is here to help you meet The Center for Disease Control and OSHA's guidelines. Due to the COVID-19 outbreak, we are here to do our part to help prevent the spread of this terrible virus and help protect your workforce. You and Protocall's Healthcare Staffing team will be the first line of defense in confirming that employees do not have symptoms that could potentially jeopardize the health and safety of your workforce.

Protocall's Healthcare Division has received the "Gold Seal of Approval" from The Joint Commission, the oldest and longest standing accreditation body for healthcare quality assurance.

You can choose a Protocall Nurse or a Protocall Certified Medical Assistant (CMA) who will arrive dressed in scrubs to provide on-site screening for employees entering your facility. Protocall can provide a new infrared thermometer or use your device. Our Health Screening Professional will ask your company's questions regarding COVID 19 exposure (optional) and will perform a non-invasive temperature check and follow your procedure for documentation. If necessary, he/she will assist with the next step protocol you might require.
